

H₂Ultra Sport Operating Instructions

H₂Ultra Sport (1500ml)

Instructions for Use

Bottle Body

Bottle Cap

USB charging cable

First Use

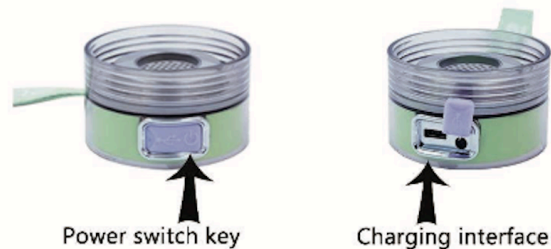

1. Prior to first use please clean the bottle by adding about 250ml of warm water (about 45°C- 50°C). Shake well and let stand for about 15 minutes. Rinse and repeat twice. You are now ready to use the bottle for hydrogen production.
2. The recommended water is purified, filtered, bottled or distilled water. Do not use tap water that contains chlorine as it will damage the generator.
3. Do not pour carbonated water or other carbonated drinks or any kind of flavoured water or juice into the bottle. Do not pour any chemical cleaner or soap into the bottle.
4. Water temperature does impact hydrogen yield. The colder the water the higher to hydrogen yield. However do not use water at or below 0°C nor above 60°C. We recommend water at either room temperature or refrigerated water at about 15°C.

Cleaning

1. Depending on the quality of water used scale may build up inside the bottle. This can be cleaned with a mixture of household white vinegar mixed with water at about 40°C. Shake well and then let stand for about 15 minutes. Rinse the bottle thoroughly two or three times with clean water to remove any vinegar residue. The bottle should be ready for use again.

Storage

1. Store the bottle in a cool place. Do not place bottle near high temperatures. Do not place bottle in dishwasher. Do not heat the bottle and do not place bottle in freezing conditions below 0°C.

Charging Instructions

1. Use the enclosed USB charging cable to charge the Hydrogen water bottle.
2. The red LED light indicates the battery is low and should be charged.
3. Once plugged in, the flashing green LED light indicates that the battery is charging. It will usually take 2 – 3 hours to complete a full charge.
4. When the green LED light is steady it means the battery is fully charged.
5. Unplug the USB cable after charging is complete.
6. A full charge will provide power for about 10 -15 six minute programs.
7. Do not use the bottle during the power charging process.

Operating Instructions

1. Pour water into the bottle to the indicated 1500ml water level. Close the top firmly. Invert the bottle so the bottle is standing on the bottle cap.
2. Press the power switch to start production of hydrogen enriched water. The coloured LED light will come on. The program time is 6 minutes. Once the hydrogen program is complete the LED light switches off. If you wish to produced a higher concentration of hydrogen you may press the power switch again once the first program is complete. The water is ready to drink.
3. Do not open the bottle cap while the power is on. If you wish to stop the hydrogen program you can press the power switch until the LED light turns off.
